

94-0191

The invention relates to the veterinary medicine and can be used for obtaining preparations having lactogenic actions for disease prophylaxis and treatment of animals, preferably pigs. The purpose of the invention consists in increasing the therapeutic effectiveness of the preparation.

The lactogenic preparation is made of human placenta - chorion with the addition of sterile distilled water in the concentration of 1:0,8-1:1,2. Utilization of denatured chorion as an active substance, ensures the attainments of a high curative-prophylactic effectiveness.
