

94-0224

The invention relates to the medicine, namely to the experimental cardiology and can be used as a remedy having antischemic activity.

The purpose of the invention consists in increasing the myocardium protection being in the condition of a complete ischemia, manifesting in the reduction of contracture degree, contracture pressure speed, restoration of contractility and myocardium relaxation process as well as its power ensurance.

It is achieved by utilization of *Spirulina platensis* (Nordst.)CALU-835 blue-green alga biomass aqueous extract.
