

a 2003 0237

The invention refers to agriculture, namely to cold accumulators for storage of agricultural products.

The cold accumulator contains a capacity with cover and water inlet pipes, as well as a fan and water level gauges placed into the capacity, joined with the control unit. Novelty consists in that the accumulator additionally contains a transfer pump, joined with the capacity by means of a pipe-line, which is joined with the pipes fixed into the wall of the capacity in the upper and lower parts correspondingly, and the fan is mounted onto the shaft of the electric motor, installed onto the cover of the capacity.
