The invention relates to the veterinary medicine, namely to a process for stimulating the productivity of broiler chickens.

The process includes the introduction of an extract from the biomass of *Spirulina platensis* CNM-CB-02 cyanobacterium in the concentration of 0.01...0.1% of dry substance in saline. The preparation is administered intramuscularly to broiler chickens on the 9th day of life in a dose of 0.3...0.6 ml/capita and on the 21st day in a dose of 0.4...1.0 ml/capita.
