

The invention relates to agriculture, namely to frames for greenhouses, used in farms, as well as in individual farms. The frame for greenhouse comprises vertical posts (1), rigidly mounted on a base (4), a roof (2), fixed on the upper ends of the posts (1), and walls (3), connected to the ground and the roof (2). The posts (1) are made in the form of telescopic jacks (5) for lifting and lowering the roof (2). The walls (3) are made with the possibility of folding.
