

The utility model relates to the feed processing plants in the subsidiary farms and may also be used for woodworking.

The plant contains a demountable body consisting of two parts 1 and 2. In the upper part 2 there is installed a pair of feed rollers 29, 30 for coarse fodder and a drum shredder 24 with driven shaft 31. The upper part is fixed to the lower part 1 with wedge grips 16 and force clamps 17.

In the lower part 1 of the body there is placed an electric motor.

The plant is also provided with change tools 39 which can be fastened to the upper or lower part of the body. In the capacity of change tool there may be used a universal woodworking apparatus which is installed onto the lower part 1 of the body, demounting for that the upper part 2 and fixing instead of it, by means of wedge grips 16 and force clamp 17, the said apparatus.

The technical result consists in extending the functional possibilities of the plant.
