

93-0022

The invention relates to agriculture and particularly to technology of growing agricultural crops and the selection of obtaining seeds of stevi. (*Stevia Repaudiana* Berton).

The goal of the invention develops the method of obtaining seeds of plants which are difficult to pollinate as stevia is.

The method includes the artificial pollination by means of (*Stipa dsyphilla* Lindem) and the cultivation up to complete maturation of the air 30-50°C and the humidity of 60-80%.
