

93-0062

The invention relates to the medicine, particularly to the oncology and can be used for treatment of the patients having mamma cancer during the preoperational period.

The purpose of the invention: - a more effective treatment of mamma cancer in a shorter period.

The method of mammar cancer treatment during the preoperational period includes the intravenous chimiotherapy and local hyperthermia of ultrahigh frequency (UHF).

The novelty of the method consists in the fact that prior to the local hyperthermia of ultrahigh frequency (UHF) supplementary is made the local chemotherapy by injecting a maximum admissible dose of cytostatic into the tumorous lodge in its two polar points.
