

**94-0015**

The invention relates to the herbicide remedy in the form of moistening powder containing an active substance - derivative of choline, active substances and a carrier. The carrier is characterized by the fact that it contains as an active substance the derivative of choline with a general formula

where  $R_1$  - are hydrogen, methyl, ethyl, or the group  $H_2NR_3(CH_2CH_2OH)$ ,

where  $R_3$  - are hydrogen or 2-hydroxyethyl;  $R_2$  - are hydrogen, methyl, ethyl or brommethyl;

$X_n$  - are 5-chlorine, 7-chlorine or 5,7-dichlorine, as active substances contains sodium salt of diisobutyl-naphtalene; L sulfa acids and sodium salt of lignin sulfa acids worked out with sulfite liquor and in the capacity of carrier - powdery silicagel with mass ratio 20:3:17:60 correspondingly.
