

94-0018

The invention relates to the chemical agents for the uncultivated and undesirable vegetation control.

The herbicidal composition comprises besides the additional substances an active-derivative substance of tetrahydrophthalimide having the general formula:

wherein R₁ represents hydrogen, C₁-C₅-alkyl, methylhydroxymethyl, ethylhydroxymethyl 2-(methoxy)-ethylhydroxymethyl, allyl, 2-chlorallyl, 3-chlorallyl, 2,3-dichlor-allyl, 3,3-dichlorallyl, propargyl, 3-brompropargyl, 4-chlorbuten-2-il, 3-chlorbuten-2-il;

R₂ represents hydrogen, fluor, C₁-C₃-alkyl, phenyl; R₃ represents hydrogen, methyl; X - represents hydrogen, fluor, chlor; n=0 or 1. The content of the active substance in the herbicidal composition consists 2-80% of mass. The composition effectively attacks the uncultivated vegetation and doesn't attack the gramineous crop plants.
