

**94-0023**

The invention relates to fungicide remedy in the aspect of suspended concentrate and to the control of the proceeding of poisonous mushrooms. The invention increases the biological activity using the fungicide remedy under the form of suspended concentrate that contains 1- $\delta$ 3-(4 tert-butylphenyl-2-methylpropyl-piperidine and 1- $\delta$ 2-2,4-dichlorophenyl)-4-N-propyl-1,3-dioxan-2 il the masses proportions (1:5)-(5:1) in quantity of 20-45 g/he, in comparison with the know proceeding and the main remedy of phenpropidine and 1-tert-butyl-2-(1/V-1,2,4-triazo-1-il)-2-(2,4-dichlorobenzyl) ethane.
