

94-0043

Usage: the invention relates to the chemical plant protection agents, namely to the fungicide agent on the pyridine derivatives basis. The purpose of the invention consists in increasing the fungicidal activity. The said purpose is attained by using the fungicidal agent which comprises pyrimidine derivatives having the formula 1:

wherein R₁ represents hydrogen, fluor, chlor, bromine, methyl, trifluormethyl, methoxy, ethoxy;

R₂ represents hydrogen, fluor;

R₃ represents C₁-C₂ - alkyl, hydroxyethyl, cyclopropyl with fluor or bromine, substituted methyl.

R₄ represents cyanopropyl unsubstituted or substituted by fluor, chlor, bromine or methyl in an amount of 2-25% of mass specific additives - the rest.

The new biologically active substances may be used for plant protection, for preventing the crop plants attack by the phytopathogenic microorganisms or pest insects and for these pests control.
