

94-0044

The invention relates to the chemical plant protection methods, particularly to the fungi controlling method by fungicidal treatment of plants or biological current thereof with the 3-cyano-4-(2,3-dichlorophenyl)pyrrole and 1-(4-(4-chlorophenoxy)-phenylethyl)-1H-1,2,4-triazole derivatives.

The purpose of the invention consists in increasing the fungicidal activity of the method. The invention is characterized by the fact that in the capacity of 3-cyano-4-(2,3-dichlorophenyl)-pyrrole derivative it is used the 3-cyano-4-(2,3-dichlorophenyl)-pyrrole and in the capacity of 1-(4-(4-chlorophenoxy)-phenylethyl)-1H-1,2,4-triazole derivative it is used the 1-(2-(2-chloro-4-(4-chlorophenoxy)-phenyl)-4-methyl-1,3-dioxolane-2-yl)-1H-1,2,4-triazole in the fungicides ratio 10:1-1:5 in an amount of 4-25 ha.
