

**94-0100**

The invention relates to the sewage water industry, in particular to the sewage water purification from colorants, which are broadly used in textile, chemical and other industrial branches.

According to this invention the sewage water purification from colorants hold on the filtration way through diatomite, which preliminary was mixed with woody-sawdust at 1:1 ingredients ratio, mass and following the heating activity on the temperature of 800°C.

The technical effect of the invention contains on the simplicity and reducing process of sewage water purification from colorants, with higher degree of purification.
