

94-0103

The invention relates to the fungicide remedies with an increasing synergism against the illnesses of plants and against the microorganisms affecting the plant material destined for reproduction, particularly for the chemical disinfection of seeds. The invention refers also to the prevention of illnesses in the growing process of the cereals. The fungicide remedy for plants is formed on the basis of 1-(2-chloro-4-(4-chlorophenoxyphenyl)-4-methyl-1,3-dioxolan-2-ylmethyl)-1H-1,2,4-triazole(I) and 4-(2,2-difluoro-1,3-benzodioxole-7-yl)-1H-pyrrole-3-carbonitrile (II) as active substances. The weight proportion I:II is from 1:66 to 10:1 and has the ingredients:

active ingredient - 5-75

specific ingredients - the rest.
