

94-0227

The invention relates to the process for 1,2,4-triazole alkylhalogenide new derivatives obtaining possessing fungicidal properties and which can be applied in the agriculture.

The process for 1,2,4-triazole derivatives obtaining is of general formula:

where R<sub>1</sub> - alkyl with 1-4 hydrogen atoms, unsubstituted phenyl or phenyl substituted by one or two halogens, alkoxy with 1-4 hydrogen atoms;

R<sub>2</sub> - unsubstituted phenyl or benzyl or substituted by alkyl with 1-4 hydrogen atoms, trifluoromethyl, phenyl or phenoxy group, by one or two halogens, it is characterized by the fact that the combination is of general formula:

wherein R<sub>1</sub> and R<sub>2</sub> have said values;

X - halogen, it is subject to the interaction with 1,2,4-triazole in an inert solvent with the subsequent separation of the product for special purpose.
