

**94-0237**

Utilization: Food Industry, particularly milling, elevator for the extension of the final product and the simplification of the method. The main idea of the invention is the material at least 2 times is passed through triturated floors with 4 mixing mills-without sieves between double triturating and after that it's sieved after sieving the material is triturated and then triturated again. The double trituration is done 4-6 times and spontaneous trituration is established 2-6 times. The mill includes triturating systems two of them are double made without a sieving system between two pairs of mixing mills.
