

94-0285

The plants of new sort are of high growth (140-170 cm height) and have ellipsoidal form. Leaves are big (45-50 cm), having sessile base, the shape is oval-extended and have a smooth surface. The medium harvest is 36,4 q/ha in 4 years of competitive sort testing, the maximum harvest is 44,0 q/ha. The raw material is high. The efficiency of raw material of Ist an Ind quality is 90-95%. Raw material is of skeletal type. After the fermentation the leaf keeps the colour, doesn't dark and doesn't get mouldy depending on drying methods of leaves and technology of tobacco cultivation, the colour of fermented leaf varies from yellow until red-orange.

The sort possesses a high resistance at the first race of tobacco meane, at the virus of Addison's disease of tomatoes, at cucumber's mosaic and at root's decay.
