

94-0351

The invention relates to the packing field, namely to the cigarette packing processes. In the proposed cigarette packing process, consisting in wrapping a group of cigarettes into a foil or paper blank with the subsequent arrangement of the blank into the pack, is arranged in the pack so that the ends of the cigarettes provided with filter cigarette-holders must be placed at the bottom of the packs and the lighting ends of the cigarettes must be in the upper opening side of the pack.

The proposed process allows to exclude the fingers contact with the filtering cigarette-holders.
