The invention relates to the steroid glycosides, particularly application of well-known tomatoside (TM) as tobacco immunizator to the tobacco bronzing virus (TBV). Theobtaining of TM is realized by extraction of tomato degreased chopped seeds by 70% methanol.

Utilization of MT shows its influence on the tobacco seeds presowing treatment with 100% - affection according to the control of H₂O and formamene. The most effective concentration of TM into water is 0,01% for TBV.
