

95-0279

The invention relates to the machine building and may be used for preparation of dry, semidry solution and concrete mixtures.

The mixer contains a shaft with mixing members fixed to it in a helix in the form of rods with the incidence to the mixer outlet part, a body with load and unload windows and shaft bearing, a asprayer and a rolling board.

The technical result of this device consists in increasing the mixing members action voluminal zone on the mixed material, increasing the mixing members contact line with the mixture and prevention of seizure.
