

95-0396

The invention relates to the vaned diffusers of the centrifugal pumps and may be used in the pump engineering.

The vaned diffuser of the centrifugal pump contains two disks 1 and 2 rigid connected between them on the outer surfaces of which are placed the blades 3, 4 orientated in opposite directions. The central hole 5 in the disks is intended for mounting the vaned diffuser on the drive shaft.

The technical result of the invention consists in decreasing the clearance of the centrifugal pump.
