

96-0123

The invention relates to the protecting of plants from the phytopathogens and may be used in the agriculture, horticulture for the plant pest control which comprises applying of triazole compound represented by formula (I):

, wherein R₁ is a hydrogen atom, C1-C4-alkyl, C3 - C4 - alkenyl or 2-propynyl group;

R₂ is C1-C6 - alkyl, cyclopropyl or 1-methylcyclopropyl group;

R₃, which may be the same or different, is a halogen atom selected from the group consisting of chlorine, bromine and fluorine, C1-halogen-substituted C4-alkyl,

C1-C3-alkyl, C1-C3-alkoxy, phenoxy, phenyl, cyano or nitrogroup, n is an integer number of 0 to 3;

or its salts at a dosage rate of 0,02 to 5 kg per hectare, so as to form a protective layer on the soil surface, whereby the plants are protected from phytopathogens.

The compounds are used themselves or in the mixture with others compounds and carriers for use as fungicides, herbicides or plants growing regulators.

The active ingredient content in these compounds consists 0,1-95 percents by weight.
