

**96-0174**

The invention relates to the agriculture, particularly, to the agricultural products storage.

The summary of the invention consists in the average sample selection and in the determination of the ethylen quantity (A) and malondialdehyde (O). The fruits are taking down from the storage when the relation A:O is lower or equal to 1.

The technical result of the process consists in the increasing of the determination exactness of the fruits taking down from the storage that leads to the reduction of the products storage losses.
