

**96-0232**

A moulded cladded panel (15) consists of a bearing surface (17) and attaching means, made in the form of figured recesses and overhangs. The profile of the moulded panel bearing surface corresponds to the adjacent bearing panel surface one. The moulded panel is also provided with means (18) for interfitting with adjacent panels in end-to-end relation.

The technical result of the invention consists in the possibility of fastening the panel with means having its configuration.
