

96-0342

The invention relates to the agriculture, namely to the microbiological means for increasing the plants crop.

The summary of the invention consists in the fact that *Rhizobium japonicum* CNM RB - 01 legume bacteria strain for soya seed treatment is proposed, which possesses a high air nitrogen fixing capacity.

The technical result of the invention consists in increasing the nitrogen fixing capacity of the rhizobio-radicle system, the seed crop growth and amelioration of the nutrient qualities thereof.
