

96-0359

Summary of the invention: the device contains: the first 2 and the second operational amplifier 3, multi-order-digital voltage divider 4, the first 9 and the second commutator 15, changeable standard voltage measure 13, microprocessor system for control, processing and data representation 19, control scale multiresistor 5, internal frame-screen 1, external frame-screen 10, first, second 12, and third group 14 of N-clamps, 2N-outlet clamps 17, clamp 18 for connecting to the ground mat. In addition, the device
