

97-0010

The invention relates to the erythromycin derivatives used as drugs in fighting with infections, in particular, to the antibiotics.

There are claimed erythromycin derivatives of the formula (I):

wherein R represents a radical $-(CH_2)_n$ Ar, n being equal to 3, 4 and 5;

Ar represents a heterocyclic radical, possibly substituted;

Z represents a hydrogen atom or the remainder of an acid,

as well as the process for their preparation and a pharmaceutical composition on base thereof.
