

**97-0013**

There are filed fungicidal mixtures where as base active component I is used the metalaxyl containing R-enantiomer of more than 70% by weight. As component II it may be used: mancozeb, chlorothalonil, copper salt, folpet, fluazinam using independent or in the mixture with one of the mentioned components (three-component mixtures).

The technical result consists in increasing the fungicidal activity of the prepared mixture.
