

97-0119

The invention relates to agriculture and may be used in viticulture.

Summary of the invention consists in the treatment of plants 8-12 days before the full flowering and in the grape growing period with a biological active solution. The novelty of the invention consists in, that the steroid glycoside [(25R)-5 α -furostan-2 α , 3 β , 26-tetraol)]-26-O- β -D-glycopiranoside in concentration of 0,0001...0,001% is used as biologic active material.

The technical result consists in plants physiologic processes optimization that provides increasing of grapes sugar content, decreasing of acidness thereof and increasing of grapes mass.
