

97-0128

The invention relates to the agriculture and may be used in the pesticides catching devices.

The pesticides catching device consists of the sprayer with the drive, for example, tractor's drive, on the sprayer is mounted the frame with a telescopic cross-beam above the solution sprayer. On the beam ends there are suspended shields with accumulators in the inferior part and filters. Into the accumulators there are situated pistons connected to the sprayer by the pipe. The accumulators are realized in the form of a reservoir with point raised above the soil. The ejectors are used as piston, by that, they are connected to the sprayer piston by one pipe, and to the sealed reservoir - by the other one.
