

**97-0160**

The invention relates to the purification of sewage, containing suspended matters and petrol containing products, and may be used on the washing trestles, petrol stations, oil storages and so on.

The summary of the invention consists in the fact that the installation contains settling tank with water distribution chute, oil collector, oil reservoir, filters block, vertical partitions disposed before the filter block and forming the communicating channels, the oil reservoir contains a chute and two chambers sequently disposed and connected one to the other, the oil collector is manufactured in form of the tube having a slot and is installed with the possibility to move along the vertical guides and is connected to the oil reservoir chute and the settling tank bottom is realized with the inclination and is provided with the gate valve.

The technical result of the invention consists in the structure simplicity, reduction of the installation dimensions, operation and maintenance simplification.
