

97-0174

The invention relates to the medicine, namely, to the obstetrics.

The summary of the invention consists in the fact that in the second quarter of pregnancy it is administered a homogenized tissue suspension of the villous chorion-syncytium and cytotrophoblast under the scapula lower angle subcutaneously in a single dose of 0,5 g/10 kg.

The technical result consists in the normalization of immune and hormonal relationships in the mother-placenta-fetus system and elimination of pathogens out of the body.
