

The invention relates to chemistry and medicine, in particular to the protein kinase inhibition. There are claimed derivatives of the 6-arylpyrido[2,3-d]pyrimidines and naphthyridines of formula (I)

wherein X represents CH or N;

B represents halogen, hydroxyl or NR₃R₄.

There are also claimed a pharmaceutical composition and methods of treatment of atherosclerosis, restenosis, psoriasis, bacterial infections and of inhibition of the tyrosine kinase receptor cell proliferation and migration.
