

**97-0257**

The invention relates to the bowser stations equipment and may be used in the fuel dispensers.

The fuel dispensing column comprises an remote control electronic desk (5) with a display and a memory as well as a local electronic desk (6) with indicators. The column is also provided with a fuel metering device having a blading transducer (4), piston pump (1) and a dispensing cock (3) with a hose.

The technical result consists in increasing the measuring precision of the released fuel by equipping the column with inertialles electronic local and remote control desks.
