

97-0287

The invention relates to the agriculture, namely to the tools for cutting of brandres and harvesting of fruits.

Summary of the invention consists in the fact that the hand cutter includes a handle (1) with a cutter (2) fixed to it. The novelty consists in the fact that the cutter (2) is V-shaped in a cross section with an angle of 120-150°, the free end thereof bifurcated with divergence, by that the divergence angle is of 10-30°.

The technical result consists in decreasing the physical loadings.
