

98-0088

The invention refers to the electrochemistry, in particular, to the composite coatings deposition apparatuses.

The apparatus comprises an electrolyzing bath with a pocket 2 in interior thereof, formed with a vertical partition 5 which isn't touching the bottom 11, a heater 3, guiding pallets 9, a grid 8 and electrodes 10. The electrolyzing bath bottom 11 is made in the form of a non-symmetric bunker with the accumulation center near the pocket 2.
