

98-0095

The invention relates to sprayers, in particular, to the knapsack sprayers.

The sprayer contains a plastic tank 1, a pump 3 installed into the tank upper 16 and lower 15 nests, a lever 6 for pump driving and a lever support, placed on the tank bottom. The lever support contains a longitudinal stiffening rip 14, made integer with the tank bottom and the lower nest 15, two metallic stripes, surrounding the rip 14 with the lower nest 15, and two base plates for the lever axis fixed to one of the metallic stripes.

The technical result consists in rising the stiffness of the lever support.
