

98-0103

Invention relates to the agriculture, particularly, to the plant-growing and may be used for rising the plants resistivity in the conditions of humidity lowering.

Summary of the invention consists in presawing seeds treatment with a biologic active material such as hexa-m-acetato(O,O')-m₃-oxo-tris(N-N'-diethylnicotinamid)diiron(III)cobalt(II)monohydrate in the quantity of 0,001 up to 0,1 kg per ton of seeds.

The technical result consists in increasing the germination power, acceleration of growing, plants biomass accumulation and in stimulation of the root system formation.
