

98-0122

The invention relates to the antimutagenesis, particularly, to the crop plants protection in case of atmospheric pollution and may be used in the selective-genetic practice.

Summary of the invention consists in the fact that there is proposed 5-ethyl-5-phenylhexahydropyrimidinedion-4,6 (hexamidine) as antimutagenic agent.

The technical result consists in activation of fermentative, physiological and biochemical processes.
