

98-0254

The invention relates to the medicine, particularly, to the traumatology and orthopedics and may be used for diagnosis of the functional disturbances into the vertebra cervical portion.

The proposed method comprises fixation of the compass to the patient's head, regulation of zero degree in respect of the midsagittal head plane, carrying out the head rotations to the left and to the right and determination of the rotation angle.

The result of the invention consists in determination of the vertebra cervical portion rotation function.
