

99-0018

The invention refers to the lighting equipment, namely to a goblet with lighting and lantern.

A goblet with lighting contains a cup with a hollow metallic leg on a base. Into the leg cavity it is placed a power source, connected to an electrical lamp, placed into the cup. The leg is joined with the cup and the base by means of a bush by threaded connection. The base is made in the form of a cone, inside of which on the top it is mounted the second electric lamp. The internal conic surface of the base is covered with a light reflecting layer.
