

99-0027

The invention refers to the processes for pharmaceutical packaging, namely, to the mustard plaster packaging.

The process for mustard plaster packaging consists in the fact that the mustard plaster, made in the form of cells and representing a rectangle, is rolled up along its short side, the roll is fixed to exclude its unrolling and is charged into the apparatus for material packaging. The further packaging is carried out automatically on the standard equipment.

The result of the claimed invention consists in reducing the labour expenses.
