

**a 2001 0206**

The invention relates to the pharmaceuticals, in particular, to remedies forming at evaporation films with bactericidal and antimycotic action.

Summary of the invention consists in that the dermatologic film-forming composition contains an active ingredient juglone, a film-forming agent *Eudragit L* (variant 1) or ethyl cellulose (variant 2), citric acid in the capacity of stabilizer, glycerine and benzyl alcohol as plastifiers and ethyl alcohol in the following ratio (mass %):

juglone	0,10...0,30	citric acid	0,01...0,20	<i>Eudragit L</i>	4,00...6,00 (variant 1)	ethyl
cellulose	2,00...4,00 (variant 2)	glycerine	1,50...3,00 (variant 1)		2,00...5,00 (variant 2)	benzyl
alcohol	3,00...7,00 (variant 1)		4,00...6,00 (variant 2)	ethyl alcohol	the rest.
