The invention relates to the agriculture and may be used in the selection for obtaining of hybrid seeds in distant hybridization.

The process for obtaining of hybrid seeds in distant hybridization includes treatment of the wheat castrate flowers with the 0,001...0,005% aqueous solution of steroid glycoside sum, isolated from egg-plant roots and pollination thereof with rye pollen, which is carried out in 5...10 min after treatment.

The result of the invention consists in increasing the yield of hybrid seeds.
