

The invention relates to compositions used in the food industry, in particular in wine-making for obtaining of corks for wine.

Summary of the invention consists in that the composition for manufacture of corks contains ethylene vinyl acetate, azodicarbonamide, zinc oxide, synthetic isoprene rubber, calcium stearate, dicumyl peroxide and wax, obtained from rice siftings, in the following ratio of components, mass %:

ethylene vinyl acetate	55...70
azodicarbonamide	0,15...0,25
zinc oxide	2,0...10,0
synthetic isoprene rubber	7,0...20,0
calcium stearate	2,0...5,0
dicumyl peroxide	0,2...2,0
wax, obtained from rice siftings	3,0...10,0
