

The invention refers to the tobacco industry, namely to the aromatizing compositions improving the organoleptic properties of the tobacco blend, as well as to processes for obtaining such blends.

The aromatizing composition contains in determined proportions in the capacity of active ingredients labdadienols with manoyloxides, odorant product "Ambrial", sclareoloxide, tobacco essential oil, coriander essential oil, rose essential oil, cinnamic aldehyde, trans-anethol or fennel essential oil, amyl acetate, ethyl acetate, eugenol, vanillin and rum essence.

By aromatization with the claimed composition of the sauced tobacco blend, consisting of tobacco varieties "Virginia", "Burley", "Oriental", reconstituted tobacco and expanded nerves, there are improved the aroma and taste of the tobacco smoke.
