

a 2003 0178

The invention relates to a sarment and twigs cutter and may be used in the wood working industry.

The sarment and twigs cutter includes a bunker with a vertically installed therein conic auger, joined with a drive shaft, knives, a cutting mechanism and a removal part for the chopped material. The bunker is equipped with guides, to which there are fixed the knives and counterknives. The cutting mechanism, installed under the bunker, includes an impeller with knives mounted thereon. The impeller is enclosed into a housing, a portion of which is made in the form of a sieve.
