

a 2007 0038

The invention relates to the building materials, in particular to a dry plaster mixture on base of cement and may be used for treatment of inner and outer surfaces of the construction projects. The mixture comprises cement, methylhydroxyethylcellulose, surface-active agent, citric acid, redispersible latex powder and finely ground limestone in the following component ratio, mass %:

cement	35.0...40.0
methylhydroxyethylcellulose	0.1...0.4
surface-active agent	0.005...0.030
citric acid	0.04...0.06
redispersible latex powder	1.0...2.0
finely ground limestone	the rest.

At the same time, as surface-active agent there may be used a Sumgait-type anionic detergent.
