

a 2007 0071

The invention refers to agriculture, namely to the plant pest control means.

The process, according to the invention, includes dissolution in the water with agitation of the copper sulphate crystalhydrate ($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$), addition with agitation of the dispersed bentonite and fusel oil, in the following component ratio, g/L:

copper sulphate cryctallohydrate	3...5
dispersed bentonite	10...15
fusel oil	5...10

and electrochemical treatment of the obtained suspension, with agitation, in the cathodic chamber of a diaphragm cell, at a cathodic current density of $2...5 \text{ A/dm}^2$ and pH 10...11.

The result consists in increasing the efficiency and the action time of the preparation.
